NUMBER ONE IN A SERIES

HOW TO CALL FOR THE BLUE.

CONCH SHELL

This technique was first established by residents of the Seychelles Islands who used it to attract passing pods of sperm whales. Each pod, consisting of one or more whales, produced a sufficient wake to permit local residents to host 12 consecutive international surfing championships. More recently, conch blowing has become popular at numerous seaside watering holes where it was found to attract considerably more attention than the more conventional "Excuse me" water.

SEMAPHORE

Or flag flapping as it is often called, enjoys considerable popularity among the nautically inclined. Practitioners of this particularly colorful form of communications have reported physical benefits such as an increase in the size of biceps, triceps and pectoral muscles. This has prompted one enterprising manufacturer of sporting equipment to introduce a new product called "Heavy Hugs". This means that when calling for a Blue it is now possible to get *here* into shape.

TIN CANS WITH STRING

Success with this approach depends largely upon the size of the cans and the length of the string used. Most waters or well-ventilated show some reluctance at the prospect of walking about their establishments with 50 gallon oil drums affixed to their hips. An empty Blue can (preferably of the larger variety) is considered the optimum. Users should be advised that calls across the bar are cheaper after sundown on Sundays.

Regarding Morfy last time users of this proven technique have complained of what is generally referred to as the "Liquid Bridges or Jacques Cousteau's Effect". This can be remedied by making sure that cans are completely drained prior to transmitting or receiving messages.
